PAGE 1 · THE STRATEGIC IMPERATIVE

Why Banks Need PeX

Payment exceptions are a resolution problem — not simply a transaction-processing problem.

PAYMENT EXCEPTION LANDSCAPE: FRAGMENTATION & SILOS

SWIFT MT / MX
ISO 20022 & CBPR+

Fedwire / CHAPS
High-Value RTGS

ACH / NACHA / SEPA
Batch & Direct Debit

Instant / RTP
ISO Real-Time

PAYMENT EXCEPTION OCCURS (Breaks · Rejections · Repair Queues)
41 Canonical Break Types across Account, Syntax, Sanctions, Liquidity, and Duplicates

Payment Hub
ACI / Finastra / FIS

Core Banking
DDA Ledgers

Sanctions / AML
Fircosoft / Actimize

KYC / Directory
Client Master

Clearing Rails
SWIFT / Fedline

SME Knowledge Silos
70%+ manual Excel & local macros

Manual System Lookups
6–10 disconnected queries per break

Asynchronous Handoffs
Email & ticket delays inflate cycle time

RESULT: Long cycle times, rising SLA penalties, inconsistent repair quality, and trapped operational knowledge.

THE STRUCTURAL GAP & THE NEED

1. Transaction Processing
Hubs process happy-path payments linearly

2. Exception Occurs
Breaks span multiple rails, systems & policies

3. Who Resolves?
No single system owns cross-silo context

4. Governed Intelligence Needed
Common layer between breaks & bank execution

EXECUTIVE REALITY
"Payment engines process transactions.
They do not inherently provide contextual resolution intelligence when execution breaks."

OPERATIONAL MATURITY ► PEOPLE-DRIVEN (Manual & SME Silos) ► PROCESS-DRIVEN (Task Automation) ► WORKFLOW-DRIVEN (Ticketing & Queues) ► RESOLUTION-INTELLIGENCE (Governed PeX Platform)

CORE TAKEAWAY: Banks need more than case management or workflow. They need structured resolution intelligence for payment exceptions.
