PAGE 1 · THE STRATEGIC IMPERATIVE

Why Banks Need PeX

Payment exceptions are a resolution problem — not simply a transaction-processing problem.

1. BANK OPERATIONS TODAY · *Status Quo*

- **Manual Investigation:** 70%+ of payment breaks remain manual or spreadsheet/macro-driven across operations desks.
- **SME Dependency:** Critical repair knowledge is trapped in individual operators' heads and unshared desktop files.
- **Fragmented Queries:** Operators execute 6–10 disconnected lookups across Core Ledgers, DDA, Sanctions, and Clearing engines for a single break.
- **Coordination Overhead:** Resolution relies on asynchronous email chains, manual ticketing queues, and unstructured chat.
- **Operational Handoffs:** Tier-1/Tier-2 routing queues inflate turnaround time, increasing SLA breach and liquidity penalties.

2. WHY THE PROBLEM IS HARD · *Multi-Dimensional*

- **Payment Rails:** Disparate syntaxes & protocols across SWIFT MT/MX, Fedwire, CHAPS, TARGET2, ACH, and Instant Rails.
- **Exception Types:** 41 distinct break profiles spanning syntax, sanction false-positives, missing LEI/BIC, duplicate pacs.008, and cutoffs.
- **Disjointed Estates:** Payment Hubs, Core DDA, Sanctions screening, and Clearing portals operate as independent silos with distinct lifecycles.

CORE OPERATIONAL REALITY

"An exception rarely belongs to one system,

one rule, or one operational team."

3. THE NEED: COMMON INTELLIGENCE · *Architectural Fit*

- **The Structural Gap:** Payment engines process transactions linearly; they lack contextual intelligence when execution breaks occur.
- **Bridge the Disconnect:** Interpose an intelligent resolution layer between fragmented exception events and bank execution systems.
- **Context Synthesis:** Corroborate historical resolution patterns, peripheral bank evidence, and clearing rail rules into a unified decision.
- **Enterprise Consistency:** Deliver uniform resolution logic across retail, commercial, and correspondent banking business lines.

OPERATIONAL MATURITY ► PEOPLE-DRIVEN (Manual & SME Silos) ► PROCESS-DRIVEN (Task Automation) ► WORKFLOW-DRIVEN (Ticketing) ► RESOLUTION-INTELLIGENCE (Governed Intelligence)

CORE TAKEAWAY: Banks need more than case management or workflow. They need structured resolution intelligence for payment exceptions.
